First we have to create two files i.e., index.html and style.css. then by using href we link style.css file in index.html.

The below code should be written in index.hml;

<!DOCTYPE html>

<html>

  <head>

    <meta name="viewport" content="'width=device-width,initial-scale=1.0">

    <title>Calculator using javascript </title>

    <link rel="stylesheet" href="style.css">

  </head>

  <body>

  <div class="container">

    <div class="calculator">

      <form>

        <div class="display">

          <input type="text" name="display">

        </div>

        <div>

          <input type="button" value="AC" onclick = "display.value = '' " class="operator">

          <input type="button" value="DE" onclick = "display.value = display.value.toString().slice(0,-1)" class="operator">

          <input type="button" value="." onclick = "display.value = '.' " class="operator">

          <input type="button" value="/" onclick = "display.value = '/' " class="operator">

        </div>

        <div>

```html
        <input type="button" value="7" onclick="display.value += '7' ">

        <input type="button" value="8" onclick="display.value += '8' ">

        <input type="button" value="9" onclick="display.value += '9' ">

        <input type="button" value="*" onclick="display.value += '*' " class="operator">

    </div>

    <div>

        <input type="button" value="4" onclick="display.value += '4' ">

        <input type="button" value="5" onclick="display.value += '5' ">

        <input type="button" value="6" onclick="display.value += '6' ">

        <input type="button" value="-" onclick="display.value += '-' " class="operator">

    </div>

    <div>

        <input type="button" value="1" onclick="display.value += '1' ">

        <input type="button" value="2" onclick="display.value += '2' ">

        <input type="button" value="3" onclick="display.value += '3' ">

        <input type="button" value="+" onclick="display.value += '+' " class="operator">

    </div>

    <div>

        <input type="button" value="00" onclick="display.value += '00' ">

        <input type="button" value="0" onclick="display.value += '0' ">

        <input type="button" value="=" onclick="display.value= eval(display.value)"
class="equal operator">

    </div>

</form>

</div>

</div>

</body>

</html>
```

The below code should be written in style.css;

```css
*{
    margin: 0;
    padding: 0;
    font-family: 'poppins', sans-serif;
    box-sizing: border-box;
}

.container{
    width: 100%;
    height: 100vh;
    background: #e3f9ff;
    display: flex;
    align-items:center;
    justify-content: center;
}
.calculator{
    background: #3a4452;
    padding: 20px;
    border-radius: 10px;
}
.calculator form input{
    border: 0;
    outline: 0;
    width: 60px;
    height: 60px;
```

```css
    border-radius: 10px;

    box-shadow: -8px -8px 15px rgba(255, 255, 255, 0.1),5px 5px 15px rgba(0, 0, 0, 0.2);

    background: transparent;

    font-size: 20px;

    color: #fff;

    cursor: pointer;

    margin: 10px;
}
form .display{

    display: flex;

    justify-content: flex-end;

    margin: 20px 0;
}
form .display input{

    text-align: right;

    flex: 1;

    fonr-size: 45px;

    box-shadow: none;
}
form input.equal{

    width: 145px;
}
form input.operator{

    color: #33ffd8;
}
```

 # This project was completely made by Avala Harika

******** End of the Code*******
